

NPTI/PN measurements in JRC

- JRC has participated in the evaluation of prototype NPTI instruments during the development of the procedure
- European Commission plans to draft a recommendation on NPTI/PN measurements for harmonising approaches but leave the MS with the possibility to introduce PN measurements as an additional measure within their own national competence
- JRC will contribute to the drafting of NPTI/PN measurement procedures and technical specifications by performing two experimental campaigns with the participation of instruments' manufacturers:
 - **June 2021:** Preliminary assessment with vehicle exhaust (successfully completed with the participation of 5 instrument manufacturers)
 - **September 2021:** Dedicated laboratory and vehicle testing with input from the June campaign (wide range of emissions, sub23, volatiles, regeneration)
